

Achieving IT Right-Sourcing

Every IT organisation, regardless of size has their strengths. Some execute new changes swiftly and deliver new and innovative solutions to their businesses. Others excel at delivering operational efficiency and repeated high service levels. Many fortunate enterprises possess elements of both. Striking a balance between the two is critical to achieving a sustainable growing business that depends on Information Technology.

For those that experience difficulties either in delivering to new business requirements at the pace and complexity required by the business or delivering operational effectiveness, many decisions confront them. Defining the strategy to deal with these challenges is an essential step in resolving them.

Experience can be one of the key ingredients in defining the strategy to overcome these difficulties. One needs to look at the structure of the organisation, its key assets and decide the optimal course of action, to deliver on the business requirements and plays to the strengths of the organisation. This can involve combining elements of in-sourcing and out-sourcing to achieve “right-sourcing” for the organisation.

O-C Group experience and services can be provided to deliver the technical support necessary to define and implement the right-sourcing strategy and ensure that your IT departments are delivering on the right priorities. In an environment where IT departments are expected to do more with less, it is essential that a right-sourcing is applied to ensure maximum efficiency of IT resources and infrastructure.

Benefits

Using the O-C Group right-sourcing services to assist in your growth :

- Provides independent technical oversight of your internal departments and other vendors.
- Brings a wealth of experience from other organisations to your unique situation and can provide the optimal strategy to fit your needs.
- Challenges your IT department to see how they can deliver the business objectives in more cost effective ways.
